

Technical information sheet

Product name: Pherobank *Omnilure Thrips species*

Product number: 50429

Type of formulation: Active compounds incorporated in a plastic cylinder

Name of producer: Pherobank BV

Country of origin: The Netherlands

Shelf life: freezer (< -18 Celsius): 2 years
refrigerator (< 6 Celsius): 2 years
room temperature (< 25 Celsius): 1 year

Content:

<i>Thrips</i> attractant	31% w/w	(2.9 grams/lure, 308 grams/kg)
Inert materials (plastic and non-woven)	69% w/w	

ID active compound(s):

1) methyl isonicotinate CAS No: [1066-33-7]

Physical description of the pheromone dispenser:

Plastic tube with an integrated hook. Dimensions: 37 mm outside diameter, 66 mm total height. Weight direct from packaging: 9.4 gram.

Packaging description:

Suitable, packed per 10 in a box.

Storage conditions:

Pheromone lures must be stored in the tightly closed original packaging. We advise to store the product in the freezer or refrigerator when possible. Allow the pheromone dispensers to acclimate to room temperature in the original packaging before opening.

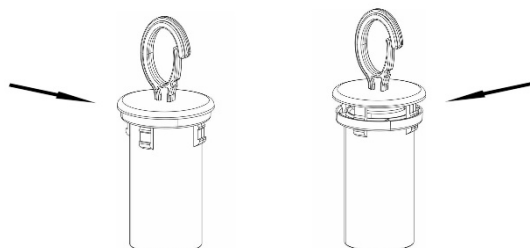

Lure longevity:

The Pherobank attractant lures for *Thrips species* will last at least 8 weeks. For best performance replace lures after 6 weeks.

Lure assembly:

closed dispenser

pull hook to open and activate

Target

- Omnilure thrips increases the number of Thrips caught on blue and yellow sticky traps, thus earlier discovery of the pest
- Omnilure thrips is effective for several Thrips species, such as *Frankliniella occidentalis* and *Thrips tabaci*, *Frankliniella schultzei*, *Hydatothrips adolfifriderici*, *Megalurothrips sjostedti*, *Thrips coloratus*, *Thrips imagines*, *Thrips major*, *Thrips obscuratus*, *Thrips palmi*
- Enhances the effect of protection measures
- Can be used in all crops

Rates

- preventive 1 lure/sticky insert for every 100 m²
- curative not applicable

Application

- attach the dispenser preferably to the upper part of a sticky trap or at least near the sticky trap
- suspend sticky trap and dispenser just (max. 30 cm) above the top of the crop

Environmental conditions

Omnilure thrips lure works year-round but is most effective in summer.

Mode of action

After opening the attractant is slowly released from the dispenser. This makes adult thrips more mobile. They appear from their shelters and are more attracted to the sticky traps. Omnilure thrips enhances the effectiveness of crop protection measures.

Important!

Suspend sticky trap and dispenser just (max. 30 cm) above the top of the crop

The introduction rates of this product should be adjusted to the mode of action of the product and the results that can be expected in the crop where the product is applied.

Only use products that are permitted in your country / state and crop.
